Met 130 Boundary Layer

HW #4 Due: March 18

Take the Ichauway sounding and write a program that:

(1) plots theta vs. height,
(2) plots mixing ratio vs. height
(3) Plots wind speed and direction vs. height

Put all three plots on one page for analysis.

Your program should read in the date and time and print that on your plot page somewhere along the top. Make sure you incorporate minor tick marks.

Hint: use your present program and modify it as you need.

This program will be the official SJSU Meteorology Radiosonde Processing Program!
